Fulfilment by Amazon (FBA) is a service we offer sellers that lets them store their products in Amazon's warehouses, and we directly pack, ship, and provide customer service for these products.Tree topsoil erosion survey undertaken in September 2017 by CSIRO Land and Water A new study funded by CSIRO, which analyses the causes and consequences of tree root damage, has been published online in the journal MATERIA. Root damage occurs when trees are exposed to drought, causing water to seep away from their roots, and into the soil. The researchers found that: The frequency and severity of tree root damage increased during summer drought, especially for species associated with fire prone landscapes and sites with limited vegetation. Drought-induced root damage reduced tree aboveground growth and can impact biodiversity if many plant species are impacted. Predicted future tree root damage is likely to increase under a scenario of persistent drought. The study, undertaken by CSIRO scientists, has found that as much as 4.5 million hectares of the world’s forests and woodlands – an area the size of West Virginia and Kentucky
