## Adobe Photoshop 2021 (Version 22.1.1) Crack +

Q: SSH/SCP path with spaces I am copying a large amount of data across two servers running Ubuntu. I would like to use scp but it is giving me some trouble. In ssh I have to type rsync -rvnrt --exclude '\*backup\*' /home/me/Source/ /home/me/Destination Because of the spaces in the path I need to put \ before each space in the path. I have tried scp -P 1234 -rvnrt --exclude='\*backup\*' /home/me/Source/\* /home/me/Destination This gives me an error rsync: --exclude='\*backup\*' is not supported for remote->local Any ideas? A: I have seen this type of problem when using a config file with relative paths to remote directories. If the relevant line in the config file is like this: # rsyncd # Use a relative path. This may be useful when using # a config file on different servers. rsyncd.conf = /etc/rsyncd.conf You need to change it to this (note the use of absolute paths): # rsyncd # Use a relative path. This may be useful when using # a config file on different servers. rsyncd.conf = /etc/rsyncd.conf Once you have done that, it may work. A: The problem is --exclude. The idea is that you can exclude files from the transfer, and different options can be used to exclude each file. The default option uses the asterisk (\*) character, but it is then expanded to the directories under source and destination. Since the '\*' character is a valid regular expression, you can use shell patterns like this to exclude directories: --exclude='\*backup\*' But you have to use \ to escape the literal \* character. For security, it would be safer to do this from a script. You can either get the line from a config file, or use a set of patterns in a shell file. For example, this sort of script could be used as an.sh file: #!/bin/sh export rsync\_exclude='\*backup\*' if [ \"\$
