But still, as we drove them from the showroom, the boys in the back seat and the old lady (who could not be less interested in cars) were having an animated discussion. "That's a classic," they said. And, they were right. It is. A 1948 convertible, with two seats in the back, as opposed to the normal three-seaters of the day. There were no factory radios or fogs back then, and no wing mirrors, no heater or light switches in the roof. And there was no air conditioning, nor was there even a steering wheel. The most striking feature is the shape of the car, a boxy, clunky sort of shape. But it was made to look sleek, thanks to the prominent, beautifully done chrome bits. And it just begs to be used. It is a classic because, first, it is an old model. We are talking 1930s, of course. The vehicles made in that era had a very heavy look about them, but the 1948s were very light and had some interesting shapes. Then there is that great marriage of the shape of a boat with the shape of a car. A wonderful, organic marriage. And then there is the

ECos-Biobank: A biobank for the study of the in vivo distribution of bioactive compounds for a better comprehension of the in vitro/in vivo correlation. The complexity of drug discovery and development has resulted in an increasing demand for better understanding of drug distribution in vivo. Experimental research has been and still is the main driving force of discovery of new drug candidates and their behaviour. However, the improvement of quality of in vitro experiments by the use of more accurate in vivo data can help to enhance our understanding of in vivo processes. The ECOS-Biobank is a well-structured, comprehensive biobank for in vivo studies with a well-defined study population. Within this project, a collection of physiological specimens, which include blood, plasma, skin, and muscle biopsies, was collected from individuals at two well-defined time points after the intake of different pharmacological compounds. These samples were frozen in liquid nitrogen and stored in the ECOS Biobank for a period of up to 24 months. The ECOS-Biobank is a well-defined biobank and a vast database which allows for various biomedical research questions.
