The first release of AutoCAD (Autocad 2) introduced the architecture known as the Reality Engine (RE). The Reality Engine used the MDA Color Chip and required the hardware architecture to be configured as follows: The MDA Color Chip with 256K of Random Access Memory (RAM) At least 4 MB of Screen Memory A 20 MB hard drive The MDA Chip was physically plugged into the motherboard via two pins. The Realix MDA Chip, as it is called in the REAL DXF files produced by AutoCAD, could support the following graphics features: 128-color tiling 16-color transparency 16 colors plus linetype for color 10 screen colors 2-color lighting 2-color shadows 2-color blending 256-color graphic representation This hardware architecture was built into a proprietary operating system.
