What I need to do is pass an integer from one function to another. A: Here is another solution which actually has the advantage of passing the "target" int to Function2, rather than just the value of x: void MainFunction() { int x = 0; int y = Function1(x); // y will equal 1 Function2(x,y); } void Function1(int x) { x++; // you could do something here with y } void Function2(int x, int y) { y++; } A: You can pass the int using ref keyword: void MainFunction() { int x = 0; ref int fX = ref Function1(x); // x will be 1, and you can change it here } void Function1(ref int x) { x++; } // // Generated by class-dump 3.5 (64 bit) (Debug version compiled Oct 25 2017 03:49:04). // // class-dump is Copyright (C) 1997-1998, 2000-2001, 2004-2015 by Steve Nygard. // #import @class TPopupButton; @interface TPopupButtonViewController : NSViewController { TPopupButton *_button; }

(video: 1:15 min.) Text: Insert the text of your choice anywhere you want, and specify the font, size, colors, and style. TrueType Font Support: Raster fonts, the default in Autodesk® AutoCAD®, now support the Web/X font extension. It is no longer necessary to change the default font from a TrueType font. Hardware Mouse Support: You can now use a mouse to create, move, rotate, and scale geometry or coordinate systems. You can also draw lines, arcs, and arcs of circles, as well as combine them with existing lines, arcs, or circles.
