Data Advisor

Data Advisor, is a computer diagnostic tool that is able to detect and correct problems on your computer's hard disk drive. Like other diagnostic tools, it is not guaranteed to work on all systems. However, its use of a boot disk (bare drive/IDE/slave) makes it very simple to make an image of your hard drive and restore a backup image. Using DAT Advisor, you can: • Easily identify and repair computer problems that often lead to data loss. • Perform maintenance on your computer that includes a scanning and repair of a hard drive. • Repair hard drives that may have been manufactured defective. • Test memory. • Test computer's internal communication paths. • Scan and repair hard disk drive. • Scan and repair hard drive using bare drive. • Scan and repair floppy drive. • Scan and repair SCSI hard drive. • Detect and correct errors in the boot sector. • Check the structure of the file system. • Check the file system structure. • Check the memory. Data Advisor can run in either a tool or a diagnostic tool. A diagnostic tool is designed to find and fix computer problems. A tool works as a backup or recovery program and should not be used as a replacement for regular maintenance. Diagnostic tools are usually designed to be easy to use and can be used with minimal computer training. Yet, they can still be used to restore lost data and/or replace damaged or failing hardware. These tools are usually designed to inspect, repair or diagnose problems rather than to modify or create data. Do not purchase Data Advisor unless you are still having problems with your computer. Data Advisor provides a tool for backup, recovery and for diagnosing problems with your hard disk drive. Data Advisor will perform a "hard drive test" using a boot disk and create a boot disk image file on your local hard drive. After initial setup, you can then use the boot disk image file to restore your backup image (or swap in a new boot disk, if needed.) Once you are done, it will check the memory to make sure it's running smoothly. Finally, it will start the software. Data Advisor, is designed to be an easy to use tool, so this is really just a way to restore your hard disk drive from a previous state.

Data Advisor quickly assesses the integrity of your hard disk drive, file structures, and computer memory by finding problems that could cause data loss. This comprehensive diagnostic tool can be used to both diagnose current problems and/or as part of a regular maintenance program to identify potential problems that could lead to data loss. If potential problems are identified, you will have time to backup your valuable information and make corrections to avoid future loss. Data Advisor comes in a variety of languages including French, Italian, German. Here are some key features of "Data Advisor": • Quick Functional Test • Performs random reads and seeks on the hard disk to check for catastrophic physical problems. • SMART Status Check • Informs you of any warnings or alerts that have been set by the hard drive. SMART (Self-Monitoring, Analysis and Reporting Technology) is a technology embedded by manufacturers into many hard drives to offer an early warning of failures. • Complete Surface Scan • Verifies the physical integrity of the hard disk platters by reading every sector on the hard disk. • File Structure Test • Reads and verifies the integrity of the File Allocation Tables (FAT). Checks critical boot sectors, reads the Master Boot Record and cross-checks partition tables and CMOS. • System Memory Test • Exercises and verifies the integrity of the memory in the computer system and detects defects and errors. Requirements: • IDE/EIDE/ATA interface and SCSI drives • Intel486 or greater processor • Minimum of 16 MB of memory (in most cases) • 1.44MB floppy disk drive Limitations: • 30 days trial.
