## What's New In GetColor?

ColorLovers is the number one source of home color, wallpaper and web design ideas, resources and inspiration. Flexible interface Once the program is installed, you need to choose how to access it. By default, the application will appear in your System Tray when you launch. The Settings screen allows you to change all settings from there, such as whether you want the application window to stay opened, as well as specify a new icon. Worth a try The interface is quite user-friendly, with everything there for you to get around in one place. You can easily create your documents, insert a watermark, or change the text font, alignment or format. There are no rules to follow, and you can use any of the actions you wish without restrictions. For instance, you can choose whether you want to include or exclude images in your files. The algorithm is always there to help you at your service, giving you several options when in doubt. One last thing about ColorLovers, we'd like to mention that it doesn't hurt at all. On the contrary, the software felt snappy and fast through our testing, keeping a fast response time and no lag. The program supports cross-platform, regardless of how many plugins you want to use. You can use it on a PC and also as a tablet-optimized app. It doesn't matter whether you use a Wacom Cintiq pen tablet, a mouse and a keyboard or any other tool, the software will work as expected.

---

ColorLovers has a clean and simple interface, with everything you need to perform common actions and find everything you need. What's more, the utility offers a portable version which lets you access it without being an administrator, and a version for Android tablets. You will need to create a folder where to store the files, though. At the very least, the user is prompted to specify the location where the editor is placed. You can set the icon, the access permissions, as well as the name. It is not very necessary to specify all of this, as everything is automatically generated when you launch ColorLovers, but we recommend you to specify the location. ColorLovers can be used on Windows 7 or 8, Mac OS X and Linux platforms. And the best thing about the software is that it doesn't mind the system it's being run on. It will work properly on all types of systems, whether you use Windows, Linux, or a Mac.
