What's New in the?

RDP-insecure is a server-side component that changes the authentication methods used by Remote Desktop Services.

Description: Sobrute is an open source virtual private server (VPS) solution based on LAMP (Linux, Apache, MySQL, PHP) and using i3 window manager. Sobrute features include IPv6 support, public IPv6 address, custom domain and dynamic IPs, email-like IMAP/POP3 with unlimited storage, PHP 5, Perl 5, Python, MySQL 5.x, LDAP, and SMTP integration, and PPP/VNC support.

Description: Jango is a Linux-based appliance that automatically discovers and configures Linux-based enterprise networks. Jango is a tool that can be used to administer networks and perform network diagnosis in an easy and intuitive fashion. Jango is a powerful software solution that enables the network administrator to maintain network functionality and to perform network diagnosis in an easy and intuitive fashion.

Description: EtherMedia Information System (EMIS) is a suite of thin client software for organizations to manage office workstations. EMIS runs on any Windows workstation and provides a robust, graphical interface to manage the Windows desktop environment remotely. EMIS allows the

system administrator to take advantage of the savings made possible by thin client technology while maintaining a single management point and standardizing the look and feel of applications across the organization. Description: ServerVault is a network-aware software image backup solution for Windows servers. It uses easy-to-understand interfaces and provides an automated approach to backups. It also enables administrators to back up their servers when they are not available on a regular basis. In addition, it can also provide online access to backups, such as a Windows backup tool that can be accessed via the Internet. Description: Built for Migrating Microsoft Exchange to O365 Succeeds in transition of virtual infrastructure to the new Microsoft cloud platform, providing you with the flexibility and ease-of-use to confidently migrate your business email environment. Enables you to take full advantage of the rich enterprise-level features included in Office 365. Description: Build web applications and create hybrid (mixed web and native) apps using our apps-builder tool. Use the backend as a database, which means you don't need to install third-party tools for databases. Use OpenLiteSpeed as a reverse proxy server to efficiently route requests for your web apps, but also allow remote users to access them. Description: Build powerful applications using C++ and the Qt framework on the Windows platform. Qt provides a full set of widgets and code building tools. Use the native Windows printing APIs. Share

objects and data between applications. Create intuitive UI designs with Qt Designer. Use XML, SQLite, or an existing database. Use an underlying object model

System Requirements:

OS: Microsoft Windows 7, 8 or 10 (32 or 64-bit) Processor: 2.8 GHz or faster Dual Core processor Memory: 4 GB RAM Graphics: DirectX 11 video card with at least 1 GB VRAM DirectX: Version 11 Network: Broadband Internet connection Storage: 2 GB available space Sound Card: Microsoft DirectX compatible sound card (MIDI is recommended) Keyboard & Mouse: Microsoft USB or compatible game controller Minimum System Requirements for Tablets:
