Zero-knowledge proofs In cryptography and computer science, there is this saying, "without trust, not only passwords, but also logins are useless". The usage of Zero-knowledge Proofs allows a random person to prove and convince an authority that they really have the password. Without the need of exposing a password, it is assumed that a Smart Contract cannot store the password. This is the case when using the Chai-zk library and this is what we implemented. First we will need to import the library
