* TextEncoder is a small and simple utility to help encrypt text files with a password. It is freeware with source code, it can help protect your text files, and keep it private and confidential from others. * It is quite fast and convenient, thanks to the good multi-threading feature. It works in command line mode, so you can easily encrypt files as you need. * It is compatible with Microsoft Windows operating systems, such as Windows 98, Windows ME, Windows NT, Windows 2000 and 2003, and Windows XP. * You can easily encrypt and unprotect files with just one click. * It is really easy to use. * Supports: Text, RTF, Word and Excel documents. * Features: Password protection, Password recovery, Auto backup. * Please see its screen-shot below. * Source Code is available here:
===== What's new in Version 1.0.0.1: * Added a new "Key Manage" feature for management of your encryption key file. * Fixed many bugs. * Improved stability. * Optimized the encryption code. * Updated the localization file and logo. * Source code is now available in English, French and German. * Source code is now more clearly written. ===== How to Encrypt File or Text in Text Encoder: Open the application, you can see its main window screen-shot as below: First step: click Encrypt, then you can choose a Password to protect your file. Second step: click OK, the file or text will be encrypted. Third step: Save the file in your computer, or choose a backup file you want to save. Fourth step: choose Recover Password, then you can choose the password you want to recover. Fifth step: click Save, the file or text will be restored. When you encrypt your file, Text Encoder will save it in a temporary file in your computer, and you can choose a backup file to save it. You can also encrypt and unprotect your file or text with just one click. You can use the Password Recovery to recover your encrypted file, if you lose the password, it is no problem. You just have to choose a password to unprotect your file or text, then you will get back your file or text. Text

Before: Just copy and paste the following codes into your text document or click the "Encrypt" button and let the program do the job for you. DES is a 64 bit block cipher and there are no patents on it. DES is still used in the Wi-Fi password of many routers, e.g. the Linksys WRT54Gv2. However, it has been superseded by AES, whose patent protection gives AES some security. Use DES for its speed and short key size, though it is not really recommended today. AES is currently the most popular alternative to DES. It is actually an improvement over DES, but was devised in 2001, so many routers will only accept AES, and they have mostly been replaced by Apple (iOS/macOS), Windows, and Linux-based devices. There is some debate about whether an encrypted text file has to be a symmetric cipher to be encrypted, but this is not generally the case. A particular file format can be encrypted using a symmetric cipher, and the cipher must be either a block cipher or a stream cipher to fit into that file format. AES is a block cipher, but blocks of data are not truly independent, so an attacker might be able to link together blocks to derive one long block. There are ways to apply padding to make block cipher behave like a stream cipher, but this is still weaker than a true stream cipher. RSA is a block cipher created by Ron Rivest, Adi Shamir and Leonard Adleman, which appeared in 1978. RSA is also known as the Data Encryption Standard (DES), the successor to DES, which was a symmetric block cipher. The patent for RSA expired in 2002, but many routers will only accept RSA certificates issued by a commercial CA. Therefore RSA is still used by routers. There are other ciphers such as Blowfish, Camellia, 3DES, BLOWFISH, mGPG etc. which are just as good or better than DES. P.S. At this time, I won't be updating this page until something changes, and I don't have time to write new cryptanalysis papers. If you want to learn more, you can refer to the CSP3 page. Sql View Diff Tool provides a Sql Server database comparison tool. It helps you compare changes in SQL Server database objects between two versions. PowerPivot: PowerPivot, the business analytics tool from Microsoft, is optimized for Microsoft Excel for the enterprise. No additional tools are required. More... Advanced Quick Viewer The Advanced Quick Viewer can add ability to view one object in a web page and focus on that object. You can click on an image in the web page to view it enlarged and then you can click on the image again to focus on that object in the current page. Chord Charts Chord Charts is a Visual Charts for Microsoft Excel. Chord Charts provides a wide variety of charts in three different views: traditional, radial and pie charts. Chord Charts also supports all classic Excel charts, such as pies, columns, bar and line charts. More... SquiggleCharts The Squiggle Charts is a non-destructive chart creation tool for Microsoft Excel. You can draw a picture and apply it to a chart, or quickly design charts that consist of straight lines, curves, and text overlays. Object Lasso Object Lasso is a tool for adding objects to your image. Choose to add a selection box, or use a mouse or keyboard to drag a selection box around an image. More... It is a unique Web 2.0 design tool allowing you to create eye-catching web pages and applications. It is an easy and powerful way to build rich, interactive web sites and is best suited for business websites. You can take advantage of power features such as advanced image effects, auto resizing, robust page navigation, built-in styles and external stylesheets, and a powerful yet easy to use scripting interface. More... Retina Ready PDF The iBriefcase PDF Manager provides a highly-customizable PDF management tool to help users with basic printing and editing tasks. The iBriefcase PDF Manager is a PDF conversion tool for Microsoft Office. This tool is built for IT and information workers. More... AVMutableVideo AVMutableVideo is a non-destructive video effects tool for Photoshop. It enables you to easily make images and movies in the same way you work in Photoshop. It is integrated with Photoshop CS5, Photoshop Elements, Photoshop CS4, Photoshop 7, Photoshop CS3, Photoshop CC. More... The

What's New in the Text Encoder?

This tool is used to encode plain text. If you want to make a text secret you can use a simple string encryption function to encode it, this way no one can read it unless they have the encoded string. Instructions: 1. Go to the textencoder.exe icon to open the main screen. 2. Click 'New Text' or 'Encrypt'. 3. Type the text you want to encode. 4. Click 'Encode' or 'Encrypt'. 5. If you want to recover your encrypted text, make sure you know the correct combination of alphabet and code. Tips: 1. Use a password before encoding or decrypting your text. 2. To prevent making a mistake, you can take a screenshot of the "Encrypt" window. 3. You can save your encoded text to a file. [Serological study of adult toxoplasmosis: IgG and IgM against Toxoplasma gondii in different populations in France (author's transl)]. The distribution of IgG and IgM anti-Toxoplasma in different populations of France is described. IgM anti-Toxoplasma is relatively rare in France, but significant positive titers may be found among patients and blood donors in Brittany and in the Poitou-Charentes. IgG anti-Toxoplasma are more prevalent and more often positive.Q: Merge subtree array into parent array using javascript? I have an array of objects which are the children of another. const children = [{ id: 1, children: [{ id: 2, children: [] }] }, { id: 3, children: [{ id: 4, children: [{ id: 5, children: [] }, { id: 6, children: [] }] }

Minimum: OS: Windows 10, 8, 8.1, or 7 (64-bit edition) Processor: Intel® Core™ i5-2500K CPU @ 3.30 GHz or AMD Phenom™ II X4
Memory: 6 GB RAM Graphics: NVIDIA® GeForce® GTX 760/AMD Radeon HD 7870 with 2 GB memory Hard Drive: 20 GB
available space Sound Card: DirectX®11 compatible Recommended: OS: Windows 10, 8.1, or 7 (64-bit
