As the Internet becomes more and

more a part of our lives, so too does the use of it change. With the ability to post information quickly and to a wider audience than ever before, many are engaging in activities online that they were not previously exposed to. Here at Carlmont we teach our students and their parents the importance of personal responsibility, ethics, and safety. In order to better prepare our students for a world beyond high school, we feel that we must teach our students what ethical behavior means. We

have created an online course on Academic Ethics and Internet Use that our students can access on their own schedule in a format that is both entertaining and informative. In this short video we discuss the challenges faced by students in today's technological society. The courses also touch on issues such as safety, the law, and privacy. Introducing `crutorrent` - a replacement for `mkrtorrent` coded in C#. `crutorrent` hopes to alleviate the issue `mkrtorrent` has with UTF-8 filenames

by using a language that natively supports C#. crrtorrent can be easily run via command-line to hash files and directories and create torrent files.
