Newsgroup and Forum (3.9+) - Indy Portal (3.8+) - Indy in Depth (3.8+) - Indy Project Wiki (3.8+) - Indy OpenSource and Indy ActiveX and COM server (3.7+) - Indy XML Support (3.8+) Note: Indy is a cross-platform

application development framework. INDY is not related to C++Builder, Visual C++, IBM or Borland products. However, Indy (Indy OpenSource) is 100% compatible with the functionality, functionality and compatibility of the components of these products. One of the goals of the Indy project is to ensure that Indy OpenSource remains 100% compatible with these products.

Therefore, Indy will continue to be supported by the same team that has supported and developed these products for many years now. Indy Tools for Visual C++: Indy Tools for Visual C++ is a set of software development tools built on top of Indy (Indy OpenSource). The tools are a wrapper for the component, and provide better debugging and simplified development tools. The tools include:

- o cppbuilderindy.exe: a visual C++

debugger for the C++Builder component o
indy.ide: a Visual C++/Delphi/C++Builder
IDE for C++Builder developers o
cobuilderindy.exe: a visual
C++/Delphi/C++Builder IDE for
C++Builder developers While the software
itself is free, the release versions of the tools
are not. Therefore, we provide the source
code for these products, and offer a license
for each of the tools that has the same terms
as the C++Builder Community Edition
license. While Indy is 100% compatible

What's New In Indy?

? Indy is an open source integrated
development environment. Designed to
accelerate application development and
portability across multiple platforms, Indy
provides most of the tools needed to develop

GUI programs: text editors, wizards, project management tools, and much more. Indy is an enhanced version of the original Microsoft Visual C++.NET version, the complete code base was extracted from that version and the entire content is compatible with Microsoft Visual C++.NET and other Open Source toolkits. Objectives: ? Build on Windows XP, Windows Vista, and Windows 7 operating systems ? Deliver the complete development environment without unnecessary features ? Feature a highly configurable windowing environment ? Be Free ? Be Open Source ? Be Portable
