========================== SlickEdit Gadgets is an assortment of useful utilities for the Microsoft Visual Studio 2005 development environment. SlickEdit Gadgets is an assortment of useful utilities for the Microsoft Visual Studio 2005 development environment. Each Gadget is a separate application icon on the Tools menu of the Visual Studio 2005 IDE (the menu containing the options for managing your projects and solutions). It is as if you're wearing a developer-friendly bracelet that offers you visual feedback on selected snippets of code or on selected selections in your workspace. You can display or hide the gadgets in the drop-down Options menu, or by pressing the Ctrl key. For more information, see "Hide and show the gadgets." Each gadget offers the following features: -- Visual information about selected code snippets: The background of the gadget is the same color as the background of the selected code. It displays the complete identifier (either fully qualified or using only the class name) of the selected code in your cursor's line numbers (or in its immediate surroundings in the line-number margin of the editor). You can change the color of the gadget's background by selecting the color from the gadget's color palette. -- Command information: The gadget's status changes as command execution proceeds. It typically shows that the selected code snippets are idle until a key is pressed to start running the command. When a command is started, the gadget turns yellow and the command name is displayed. When the command has completed, the gadget returns to its original color. -- File explorer: The gadget provides an easy way to open solutions, projects, or single files in Visual Studio. -- File explorer: The gadget provides an easy way to open solutions, projects, or single files in Visual Studio. There are two types of gadgets available. Editor gadgets, which add pizazz to an editor, and Command Spy, which documents the commands and key bindings used to invoke them. They are similar in Message List Question Answer Window Tools Gadgets It's possible to set Window Gadgets on the Window itself. This allows you to see the gadgets for a specific visual component. This is extremely useful if you have a form with multiple controls and want to see what each one is set to. Visible The Visible gadget enables you to set the visibility of the Window control. You can set it to Always, Toggle, Visible, or Hidden. Application Context Gadgets Application Context Gadgets are related to activities in the current application. These activities include: - Listening for Changes, which listens for changes in the Current Document window - Editing the Window content Listening for Changes A listening gadget is a gadget that listens to one or more of the notification fields found in the properties window. For instance, the Message field is a listening field that represents the notification listener, which is a visual notification that pops up when the listener catches a change in its notification fields. The following scenarios are supported. - You can listen to changes in the document window. - You can listen to changes in the visual component of a control. - You can listen to changes in the target properties of a script function. To achieve this, add an item to the gadget, connect the notification fields, and add a keyboard shortcut to the gadget menu. In order to receive the notification for changes in a visual component, you also need to add a custom property named TargetObject, which is required for the notification. To perform a notification, you need to: 1. Add a "Listen to Changes" gadget to the Window. 2. Add at least one notification field to the "Listen to Changes" gadget. Note that you can add many fields to a notification field. 3. Connect the notification field to a property of the Custom TargetObject. 4. Connect the notification field to a function or script that will execute a method when it receives a notification. 5. Set the key binding for the gadget. Note that the key is still +, but the keybindings page shows the shortcut name as Listen to Changes. The following snippet illustrates a function that

What the hell is going on? Aiiight so this is gonna be a tutorial where I start at the beginning, let me explain what type of art I want to create. I'm trying to work more into realism and detailed illustration. I love going through old books and the like and I was trying to figure out why I wasn't enjoying going through it when I actually started to appreciate it. A lot of that is me loving the idea of a book but not having the skill to go through and enjoy it. When you start to look
