Covalent binding of myelin basic protein to sulfatide in mouse brain synaptic membranes: possible significance for the pathogenesis of multiple sclerosis. Covalent binding of 125I-labeled myelin basic protein (MBP) to sulfatide in synaptic membrane extracts from whole mouse brain was studied at 20 degrees C in the presence of dithiothreitol, a reducing agent. Sulfatide-MBP binding was observed in fractions enriched in synaptic plasma membranes, and the extent of binding appeared to be regulated by the lipid composition of the membranes. Analyses by gel filtration showed that sulfatide-MBP complexes were dissociated by high ionic strength and by high concentrations of urea. Moreover, the association was reduced by pretreatment of the membranes with trypsin. The amounts of 125I-labeled MB
