In 2016, the AutoCAD line of products was split into two separate business units: AutoCAD Architecture and AutoCAD MEP (Mechanical, Electrical, Plumbing). AutoCAD Architecture remains a desktop CAD product. The release of AutoCAD Architecture includes new technology which, in part, allows it to use the same design language as AutoCAD MEP. AutoCAD MEP is an electronic design software application which integrates electrical, mechanical, and plumbing design in one program. In addition to the basic drawing features offered by other CAD programs, AutoCAD MEP offers features which are not found in other CAD programs, such as editing and modifying on a 3D model. Designers can use 3D models for an entire building, or just a part of it, as appropriate. Parts of the model can be hidden, shown, or shown partially. A real-world drawing can be drawn as a real-world blueprint, or a basic drawing can be extended to incorporate as much detail as needed. Subscription based for a monthly fee. Standard functions are included at no cost for the first 30 days of subscription. After 30 days, Standard functions are free for the life of the subscription. Additional, optional features are available at a cost. Most of the features are self-explanatory, but some are not. For example, features such as Measuring & Rotating and CADs-based Shapes (Surface/Solid) are not included with the Standard subscription. Interaction with other CAD programs AutoCAD is among a number of CAD systems that can be used to edit other CAD software files such as DGN (DWG), and 3D-CAD. The most well-known third-party tools are: DimensionSolver: DimensionSolver, a DGN plugin that runs in the native DWG environment of AutoCAD, is used to perform advanced alignment of object snap points. DimensionSolver is the successor of the previous DimensionLite product. DimensionLite for AutoCAD 2002 and later. MicroStation: MicroStation is a software package primarily used for designing civil and commercial buildings, including roads, parking lots, parking garages, and highways. It is a registered trademark of Bentley Systems, Inc. of Waltham, Massachusetts. A newer dimensioning software is Dimension 3D, which is available as a native plugin for the new 2010 version of AutoCAD LT. Dimension 3D is a third-party tool by The MathWorks. It is used as an extension for AutoCAD and also allows users to easily create dimensioning models in it. Dimension 3D is a native plugin for Autodesk 3ds Max 2010 and can be used with Autodesk Revit Structure 2010. Local news may be on the decline, but the study, published in the Journal Journalisn Studies, shows that fake news spreads faster and further in areas where the newspaper industry is weak and local reporting is less reliable. "As the role of traditional media has diminished, we see fake news spread more aggressively in parts of the country where there is little or no traditional media," said Kaley Leetaru, co-director of the center, in a statement. The researchers, who examined fake news during the 2016 election season, also found that fake news may be spreading more rapidly because of the proliferation of so-called "echo a1d647c40b
