Photoshop is available as a free download. Adobe offers Photoshop for \$299 for both the standalone product and the Creative Suite (photoshop, lightroom, and photo studio); it is usually sold for \$599, but a 20 percent tax can offset the price in some states. Creating and Printing Photos The basic skill required to create good-quality photos in Photoshop is the ability to understand the controls for the program. Few basic editing steps remain the same, but the choice of what filter to use when is the most common subject of debate. In this chapter, I guide you through the basics of creating your first images in Photoshop from start to finish, following the steps and basic steps that you will use time and time again. I start with the main screen of Photoshop (see Figure 9-1), where you can create new layers and work on an image by enabling selections and hiding the canvas. By the end of this chapter, you will be able to apply effects, modify images, save photos, and print them. Illustrations by Vicky Goulding **Figure 9-1:** Start your Photoshop skills with the main screen. Getting started with Photoshop The foundation of Photoshop is its layering system. All images are displayed as layers, which are organized in a z-axis. Layers form the foundation of most editing commands and work with most features in Photoshop, so it is important to master the layering system in Photoshop. In this section, I provide the basics of how to use layers and how they fit into the editing process. When working in Photoshop, you should understand the following: Layers: Photoshop layers organize and separate an image into components called layers. Each layer represents a distinct part of the image. Elements, shadows, and highlights are all layers. You can also group and ungroup layers in a layer group, and you can flatten a layer group to create a non-layered image. Layers are a fundamental part of the editing process in Photoshop. As you work, you can name layers and move, copy, and delete them from one layer to another. You cannot work on a layer without the layer above it being visible. You can work on any number of overlapping layers simultaneously. You can manipulate and paint on any of the layers. You can have more than one selection (the most common tool to select an area of an image) on a single layer. You can

Q: How to manage storage space in a Virtual Machine? We have a Virtual Machine that is running the following operating systems: Windows Server 2008 R2 Windows Server 2012 While Windows Server 2008 R2 was part of a hosting package, we're now responsible for managing the server ourselves. Today, I began administering the service and noticed that our 10 GB partition is almost full. How can I move the operating systems to another partition to make more space for our services? A: The easiest method is to use Windows Server 2012 as a guest operating system on your Windows Server 2008 R2 host. Windows Server 2012 requires less space than Windows Server 2008 R2. Edit However, this is not as simple as it seems. As you have stated that you do not have the option of doing so, here is some reasoning, hoping to be of help to others in the same situation. Windows Server 2008 R2 does not include Hyper-V for Windows Server 2008 R2 (meaning you cannot create a virtual machine with that version of Windows Server), so you need to install the hypervisor package in order to do this. If you choose to install Windows Server 2008 R2 as a guest OS, you will not have a way to restore that guest OS from backup, even though you have backed up the host. Also, if you are going to install Win Server 2012 as a guest OS, you will lose the ability to deploy virtual machines with Windows Server 2008 R2 or any previous versions of Windows Server, which I believe is a logical choice.

Q: plotting i/o pin voltage with Pyside I have a graphical user interface written in python using the Pyside module to display a complex periodic signal (a sine wave in this case) as a pin on the display. As you can see in the figure, there are no pins displayed, the plot window is empty. How can i see the pins, so that the users can see the displayed wave? This is my code: import sys from PySide import QtGui, QtCore from PySide.QtCore import * import numpy import time import wave import math def main(): signal = [] for i in range(200): r = numpy.random.random()

Q: How to create a library for spatial data I want to create a library that, given latitude, longitude and time (date of reading), create a point in a small grid (1km) and store the value in the points. The points have to be stored in some sort of database (like MySQL). The result has to be spatial data, so that it's possible to see something like a map of values. Is that possible and what is the best way to do that? (in specific scientific fields) A: You could use PostGIS. Make a map of your area and store your points in a table with latitude, longitude and the date (or timestamp) of reading. The client will only request what's in the database. Update: This post has some info about the advantages of using a database with spatial data (e.g. PostGIS). "I saw all these women in these airbrushed bikinis, none of them even halfway as good as she was. I wanted to be right up in her business. I wanted to tell her, 'You need to do this. You're the bomb. It's fucking fallacies like this that are going to give you a bad name.' But I didn't." "After we finished our first assembly, the stage manager for the in-ring technicians was walking back. She was telling us that we'd all been so awful. We were all so tone deaf to each other's emotions. Then she got to me, and she said, 'We didn't hear you.' And I said, 'You don't see this?' and she said, 'This is incredible! What you did back there was so incredible and so well done!' We didn't have to take this, and we didn't have to pass through it. That's why we're here, right? To show people that that shit doesn't have to be there." The gymnasts also get attitude from critics and fans. "For me, it's in the applause," Bui says. "The most powerful thing is when someone claps for something I'm not even doing. It shows me I am doing something
