What the... It's not rocket science, but it's hardly the miracle panacea we've been promised. See, the global biofuel industry is counting on you to swallow the greatest bait-and-switch this side of the Beef Lovers' March for the Animals. Instead of saving the world, as promised, biofuels are exacerbating the crisis of deforestation and spurring overharvesting, which in turn is driving a relentless cycle of climate change. Since their introduction in the late '90s, biofuels have been touted as the answer to our energy woes, and now the Obama administration has signed on to a (disputed) global agreement that's making it even easier for us to make the switch. Despite false promises of "unparalleled breakthroughs" made by the ethanol industry, advances in technology have failed to come anywhere close to matching the hype. Anecdotaly, a1d647c40b
