Swift I have this NSDictionary : let dict = ["Message": String(userMessage)] In this dictionary,
"Message" is the string value. And in the Method, I want to check if it's exists the key "Message" in
this NSDictionary. So I tried the next code: for (key, value) in dict { let exists = value.index(of:
"Message")!= nil if exists { // do something } } I read in the internet that it can not be done this way.
I'm looking for a way to do this. And what about this one : if let exists = dict["Message"] { // do
something } Thank you. A: The two are equivalent. The first statement iterates over each key-value
pair, whilst the second skips every key that doesn't have a message. For example: let dict =
["Message": "Hello"] print(dict.first?.value?? "No Message") // Prints "Hello" print(
