Corel DRAW Corel Draw is a 2D vector graphics package for Windows and macOS, and was developed by Corel Corporation from 1987 until 2001. It is sold as a consumer package, for use as a graphics-design tool for business, education and creative purposes, and as a professional package for architects and industrial designers. The first version was released in 1987 as CorelDRAW X, a presentation and drawing package that was similar to the system-independent 3D graphics program 3D Studio (SIGGRAPH '87 and SIGGRAPH '88). It also included a 3D modeler, vector graphics editor, and a database program. Corel added 3D features to 3D Studio and renamed the entire product to CorelDRAW in 1993. Corel DRAW was marketed to the home and education markets. In 1998, Corel added color to the product, and in 2000 it started to use XML as the format of its drawing files. In 2001 Corel launched DrawNow, a 1-year subscription product that would allow users to do everything that could be done in CorelDRAW, except those things that were not actually in the program. In 2001, Microsoft purchased Corel and in 2004 they rebranded CorelDraw as Microsoft Draw. In 2006, the "Draw" name and branding were discontinued and CorelDraw was officially rebranded as CorelDRAW, and Corel became a wholly owned subsidiary of Autodesk. In April 2016, CorelDRAW 2018 was released on macOS and Windows. CorelDRAW Graphics Suite 2018 is a commercial version of CorelDRAW on Windows and macOS that consists of many of the most popular CorelDRAW applications. The suite includes a vector graphics editor, a layout and page-layout program, a photo retouching and editing package, a color graphics editor, a digital painting program, an image scanner, a vector graphics compositor, a word processor, and a presentation package.
