Note: This article is a follow up to my previous article, Introduction to Photoshop 5.0. We will walk you through the basics of Photoshop's editing and layering tools in this tutorial. In addition to saving images to disk and finishing printed work, we'll also show you how to import images from the web and how to apply color corrections for print. What You Will Learn Open an image Zoom into an image Layer Filter Warp/Distort Color/Brightness/Saturation Curves Selective Color Correction What's Needed Personal Adobe CS3 program Any kind of CD/DVD program (e.g., Nero, Roxio) The ability to see and zoom into the entire image The ability to rotate an image The ability to select and copy/paste an image A computer with 1 GB of RAM A monitor with at least 800x600 resolution. Installing Photoshop CS3 A good IDE like Dreamweaver or Frontpage will work well in the early stages of learning. But Photoshop is a big investment, so you will probably want to get Photoshop CS3. For more information on installing CS3, please see my previous article on this subject. Getting Files Into Photoshop CS3 This is a big part of getting Photoshop to work for you. As discussed in that article, it's best to work with high-resolution images. If you plan to print your work, they need to be 300 dpi and in the sRGB color space. If you have a scanner, scan your images at 1200 dpi or 2400 dpi (10 bit) and save them as Adobe RGB. This color space is an Adobe-sponsored color space that's very similar to sRGB but is intended for color printers and may be used with older scanners and for professional-use displays. Note that Photoshop CS3 is the last version that allows the import of JPEG 2000 files, so if you need to import a JPEG 2000 file or a scanned file, you will have to use Photoshop CS2 or earlier. Getting Photoshop Installed The most common method of installing Photoshop is to download it from Adobe.com. Note that the CS3 DVD also includes the latest version of Adobe Acrobat. Depending on your Internet connection speed, you can download the entire DVD in about an hour (or 30 minutes for

Explore: Find the "Other" Why do I need to be a part of an unfamiliar church? This is a question that is so often asked by non-Christians when they are attending a service for the first time. It is a question that is meant to show how curious they are about other people, and the church. Often times, the words "Why do you need to be part of this church" are left out of the conversation. This can be a sign that the person is being prideful, but you can still ask this question without holding people to an impossible standard, like the Pharisee at the road-side. Why We Are Not Good Enough Think about the ways in which you were not good enough as a part of a church that you were a part of before. There is a good chance that these times have been forgotten already. Perhaps you remember this thing that you did on a Tuesday, or this thing that happened on a Sunday, but you can't recall any of the day-in and day-out that happened in the church during these times. This could be because you were too young to truly know anything, or because as an adult, you are in an adult-focused church where these things are accepted as normal. If you ever did have a past experience with this church that was not good, you have been looking at the wrong things. If you were singing a solo in church, and you were not good at it, did you put yourself down? Or did you praise God for the strength that He gave to your vocals? If you joined a youth group and you were not involved in leadership, did you put yourself down? Or did you thank God for the attributes He gave you in order to be a part of the group? And so on and so forth. The answer to this question is rarely, "Because I'm not good enough." It is much more often, "God knew before I got there." The Church Will Change and Change Us The phrase "the church will change and change us" cannot be used to describe the church. In fact, it is so offensive that it should be used to describe the church when speaking to outsiders. The church does not change and change its members. There are people in the church that are broken, and there are people in the church that have never been broken. We take certain

Today, it's time for my second article of the month. And what an article it is. This week, we're going to talk about medical cannabis. Medical cannabis is used for a variety of purposes, but one of the most widely known is that of treating chronic and debilitating medical conditions. And a lot of people have been hoping that cannabis would eventually be accepted and used as medicine in the US, but so far, that hasn't happened. But that could change at any time, because the FDA is now considering at least one cannabis-based drug for treating everything from cancer, to HIV, to multiple sclerosis, to even schizophrenia. Not only that, but the FDA is also granting a license to Epidiolex, a pharmaceutical company, to produce cannabis-based drugs, which would be the first cannabis-based drugs that's been approved by the FDA for human use. And that's why this week, I'm going to give you the rundown of all the medical conditions and why I think that Epidiolex and cannabis could be used to treat them. First up, and arguably the most common use for medical cannabis, is to relieve symptoms of chronic and debilitating conditions. It can be used to treat everything from chronic pain, to nausea caused by cancer or chemotherapy, to lack of appetite. In the US, people can legally use medical cannabis to treat chronic and debilitating conditions under the assumption that there are no alternative treatments for that particular condition. But, it's not so simple for doctors and medical cannabis users, because the laws vary from state to state. For example, if I were to die, and my doctor had a medical cannabis prescription from a state that didn't allow the use of it, then my doctor would be legally in violation of his/her job, and could be subject to punishment. But, in this particular case, the doctor's qualifications to use medical cannabis would be questioned, and physicians don't want to take that chance. That's why, if I were a doctor, I would try and become a "marijuana hospitalist" as they're called, and be able to prescribe medical cannabis, even though the state I live in doesn't recognize it as an accepted treatment. So, back to cannabis. Cannabis might be an unusual drug for doctors to prescribe to their patients. But it's been around for centuries as a traditional medicine. It's also used to make clothing, treat skin diseases, and even as a food pres
