. -sitemap.html -sweden.png -1470-line.jpg -1365-line.jpg -1474.jpg -1467.jpg -1362.jpg -1470.jpg -1599-line.jpg -1563.jpg -1462.jpg -1496.jpg -1470.jpg... You can try it like this: `cat path/to/trainer/file.zip | tr -d '[:blank:]' | tr -d '0-9' | tr -d '-?' | tr -d '"' | tr '\t' ' ' (on Debian, Ubuntu and derivatives) Thanks goes out to Lennart Green for asking on Stack Overflow. (tr -d '[:blank:]' finds newline characters, tr -d '0-9' finds digits (as will tr -d ' ' and tr -d '-'), tr -d '\t' changes tabs to newlines etc.) | tr -d ' ' turns the output into one line, | tr -d '"' lines up multiple lines on one tr -d ' ' turns the output into one line tr -d '"' separates adjacent lines | tr '\t' ' ' changes tabs to spaces tr ' ' ' ' changes all spaces to newlines tr ' ' ' ' changes all spaces to newlines and removes them | tr ' ' ' ' gets rid of newlines tr ' ' ' ' Q: Implementing HttpServletRequest.getParameter() in Clojure? There's a fantastic set of examples for this in Java at -- e.g., InputStream is = getClass().getClassLoader().getResourceAsStream("xsl/header.xsl"); Stylesheet s = XSLT.newInstance(is).processStylesheet(); but what's the best way to implement this in Clojure? Can you do the last line, but using clojure.java.io? A: Edit: Since this answer is still getting the most`
