• ECTO is the name of the main character, a giant robot that moves with an elephant-like trunk. It has elephant-like ears and a helmet. The name ECTO is a combination of the two words, 'ecto-' meaning 'move' or 'transportation' and 'librium' meaning 'brain', ECTO is a robot created by scientists that can solve problems and accomplish missions in alien worlds. • The game begins in the planet Ectonium where ECTO was built. The first objective of the player is to make ECTO fly to the location he came from on planet Elysium. The second objective is to create a base on planet Elysium. This is to fight against the aliens and protect the planet. • The mission planet Ectonium is a natural world full of un-explored dangers. Gaping fissures, extinct volcanoes and iron mines are there and some of the places may not exist in other planets. However, the technology for preparing steel to build robots is the most important thing for creating a robot. • In addition to Ecto, and the enemies, there are also weapons and robots in this game. You can make a sword out of iron, a gun from brass, and a powerful bomb from lead. And among them, even the toughest weapon can be destroyed by lead bullets if you are careless. • There are 60 missions in Ecto, and the player can not continue the story without full completion of them. Each mission is conducted to battle against the enemy robots and complete missions in the mission planets. • The story of the game starts with the main robot or 'ECTO' who was built in the planet Ectonium. ECTO was a robot that can solve problems and accomplish missions. The player can take over ECTO's body and fight against the enemy with him in the story. ECTO can use several types of weapons and move freely at the will of the player who is in his body. • Two other giant robots are also introduced. These are HOMDODO and ECTOMAX. Both robots are subservient to ECTO. One takes over ECTO's body to fight the enemy. The other destroys enemies around ECTO when ECTO is in full operation. • Each robot has its own skill, and the player can choose the one to be controlled and battle with in the story. You can select

**What's new:**

While not necessarily a strategy guide, Swords and Sandals Crusader Redux is a full conversion of my original Swords and Sandals published in 2012. Unlike most of my published games, it's a publication option of mine, and not one from a gaming company. It's a professionally printed game with real, working parts and turnip instead of dice. If you want to learn how to make your own games, Swords and Sandals Crusader Redux is a great place to start! One of Swords and Sandals's main struggles was graphics. Any time I go play at a store, that's what I spend my time looking at, and because the games are played solo, players generally don't take too kindly to having to look at something tacked up at the gaming table. It's difficult to teach the reading/applying of things like movement charts and the timing of timers if those things are hidden behind a player facing cover. However, the conquest system requires players to do a lot of math to handle enemy casualties during the battle turn. Specifically, there's multiple line of sight checks to get a certain amount of distance advantage, and players have to consider which marksman units to give orders to, and how many of each to order so they balance out the mooks against the more powerful weapons and armor of the core force. I quite regularly find that my games being tie, and it's never because one player is being a major pain, but because they lack the reading/application discipline that is literally at the core of the gameplay. There's no rules to 'read', but there are red octagons that you can click. The click turns the square red, and - if you can see it - you can click to move if the current blue is within a certain amount of distance. You can't move if a red is already there and you're closer, and if you click inside the red, you can spend that turn dying, killing, or capturing a section of lines you click. So you have to see the squares that are below yours, count the red squares in between, and figure out whether or not you're closer to capturing them than the ones in between. This is a a very elementary game, but my point is that combat units are so much more important than just a mission screen where "as many units as you see" go. They're the tactical gameplay, and just getting a hold of the combat math in all the different scenarios is not always an

Riot is a multiplayer shooter. It's about overtaking the world through force and a mixture of chaos and passion. The game has both offline and online multiplayer modes. Offline, you are matched against an other player who tries to take all of the city with you. Online, you shoot other players, or other players shoot you. Every match ends in a boss fight - the last one standing against the others. There are two paths in every match: You start with riot you can play in your own favor. You pick up new items, gain new skills, and make your own enemies. On the other path, you have other players who try to stop you and your party. During the boss fight, most of your troops are passively sent out. The only people who fight with you are those who have the strongest will. It's up to you who will be the last one standing. Riot has three different primary weapons: Gun, sword and shield. In each weapon, you have a limited number of shots. You always have unlimited ammo for your shield. You're hooked to a backpack that is constantly trying to discharge a random item that you pick up along the way. The first, less evolved weapon you start with is the gun. You can get a variety of guns from different places, with different stats. Once you've reached the higher levels, you also can upgrade your gun. The second weapon is the sword. The swords can get a bit stronger once you reach certain levels, but they can be also easily destroyed. The shield is the strongest weapon you can get. Once you get to higher levels, you can also upgrade your shield, but there's a limit how many it can take. You also can get new skills as you go along through the game. For example, you can learn skills that increase the healing value of your shield. When you damage an enemy, or get shot by the enemy, you get some of their energy. You can then use it to heal yourself. As the game goes on, you have to face the three different bosses who are trying to stop your party and themselves. For every boss, you get a certain number of lives. If you're reduced to zero lives, the match ends. You start with only one life. A life is consumed if you take any damage, or if you have to perform an action. You can just try
