

- Radio-SkyPipe Serial Key is a professional software package for collecting and recording radio frequency data. It features a number of analog and digital recording devices, with almost unlimited expandability. The software allows you to measure a wide variety of parameters and to save them to a data file, such as a.wav or.flac, or to a file directory. You can use this application to capture data from internet radios (Streaming), local radios, and other analog/digital devices, such as receivers, spectrum analyzers, VCOs, capacitors, power meters, etc. - Features include: - Use radio frequency test equipment as data source. - Real-time recording of analog and digital signals. - User selected trigger, ramping and other settings. - Three operating modes: Stand-Alone, Server (tcp), and Client (udp). - Support for many audio and RF devices, including VCOs, RF mixers, directional antennas, etc. - Real-time sound and spectrum analysis. - Real-time live screen capture. - Graphical user interface with touchscreen support. - Language support in Russian, English, French, German, Spanish and other European languages. - Android and iOS App downloads. - Configurable data capture parameters. - USB and serial port port compliance. - Data storage on your PC, in.xlsx,.pdf,.txt, and other formats. - Data export to.wav and other formats. - Portable version supports Mac, Windows, and Linux. - User-friendly, yet highly configurable software. - Has an adjustable interface - Wide range of units and functions available. - Flexible configuration options. - Works with.wav and.mp3 sound files. - Can store data as.wav files. - Can be used as a printer driver. - Data can be saved to text files in the.txt format. - Data can be saved to.pdf files. - Data can be saved to.xlsx files. - Data can be saved to.xls files. - Data can be saved to.csv files. - Data can be saved to.html files. - Data can be saved to.xml files. - Data can be saved to.txt files. - Data can be saved to.xls files. - Data can be saved to.pdf files.

Radio-SkyPipe is the world's first application designed for collecting and converting to audio and video data from air traffic radars, including Doppler radars and meteorological radars. It was designed for system operators (as I call them) who use air traffic radars to assist in monitoring a large, geographically dispersed region. The software features a unique grid design that makes it possible to recognize locations on the map and will remember them for a single user, making it very useful for monitoring a large region. The program works with both analog and digital radars, including the AHRS-1500 from Philips, the ADF AMR6000 by Aeronautical Technology and the MQ-710 by Micrologic. This program is designed specifically for those who want to purchase and install the necessary hardware and software in order to collect data from their radars. Radio-SkyPipe's features include: - Ability to work with both analog and digital radars - Ability to graph data from multiple radars simultaneously - Support of various aviation authorities around the globe - Ability to record data from the instrument radome - Integration with multiple weather stations, and support for various data formats - Support for external software (including some standalone weather stations) - Ability to monitor other parameters of interest, including wind speed, barometric pressure, and air temperature - Ability to monitor electrical power, a process that is more and more important as the world works toward eliminating the use of fossil fuels, including oil, coal and natural gas. Radio-SkyPipe is the tool you need to avoid losing data from your radars If you work as a system operator in an area with many air traffic radars, you need to know that the chances are high that at least one of them will fail, causing you to lose hundreds of hours of valuable data. The good news is that Radio-SkyPipe can save these data for future analysis, and is equipped to convert them to a file format that is both open and machine-readable. It can then be saved on a hard drive or burned to a CD-ROM for convenient transportation to the backup location. Radio-SkyPipe is the tool you need to avoid losing data from your radars In addition to its ability to save air traffic data, Radio-SkyPipe also offers a superb interface that makes it simple to use, regardless of your technological level. The program allows you to insert up to b7e8fdf5c8

radio-skypipe is software designed for radio and radio-astronomy enthusiasts. It is similar in concept to a tron, where all instruments are connected to a central station and can be played from a central console. Radio-SkyPipe allows you to collect data from instruments using a server or client system and is designed to allow the simultaneous recording of many different instruments, with a single network connection. The program will play instruments on the server station simultaneously, allowing you to play many instruments in the client station. Recording can be performed in real-time or can be recorded and placed on a hard drive. Radio-SkyPipe Version History: Version 1.0.3 Radio-SkyPipe Main Features: real time recording of multiple instruments over a TCP/IP connection the server and client can be on the same machine, or the client and server can be on different machines. support for various sound cards and ADC's, and multiple "instruments" single or multiple network connections Note: the following features are not yet available in this release Macros Multiple Instrument Profile Display Sequencing Display Recording name and Status Use Scheduling At present, you may use only one instrument at a time. However, future releases will be able to support multiple instruments. What's new: You may now use the browser to login to the program, instead of having to email the username/password to a support person. Fixed an issue where the status of the recording would often be absent. Version 1.0.2 Note: it is highly recommended that you first download and test this release, before attempting to install the full version. What's new: improved network support use of a Java Virtual Machine to improve performance. Version 1.0.1 1. Resolved a crash that occurred if you tried to use the program while the JVM was already running. 2. Improved performance on MacOSX platforms. Version 1.0 1. Resolved a bug that caused the application to randomly freeze. 2. Resolved a bug that caused the program to continually display a message when no recording was in progress. 3. Resolved a bug that caused the program to give a warning if the microphone was not plugged into the sound card. 4. Resolved a bug that caused the Sound Input Manager to disconnect after a period of inactivity. 5. Resolved a bug that caused the Scan Pos

#### What's New In?

Radio-SkyPipe is an internet radio data server and client. It is able to transmit recorded data over the internet to multiple clients and receive data on demand. Radio-SkyPipe is a free software for the following operating systems: Windows, Linux, MacOS X. PayPal only works for Windows, Linux and MacOS X Operating Systems. License and Availability: Radio-SkyPipe is released under GNU GPL license which is free software but in order to use this software, you must have the right to use the software and to make a copy of the software, and you must not sell or give the software or parts of it to any one else. After downloading, you can use it freely, but you must tell how you got it. Radio-SkyPipe Is Not A Serviced Radio-SkyPipe Is NOT A Serviced Software. Mail me ask at [RADIOSKYPIPE@RADIOSHOP](mailto:RADIOSKYPIPE@RADIOSHOP) The experimental Android application of Radio-SkyPipe was successfully published. It is now available as a free download on Google Play. News 16/12/2016 Radio-SkyPipe experimental Android application finally published. 10/03/2016 New Radio-SkyPipe release. New features added to Radio-SkyPipe. A new iOS version of Radio-SkyPipe. 15/12/2015 Thanks for all the good wishes for the Christmas and New Year holidays! 15/12/2015 Thanks for all the good wishes for the Christmas and New Year holidays! 12/12/2015 The first issue of the Online Astronomy Journal is now online: [www.astro.obspm.fr/eao/home](http://www.astro.obspm.fr/eao/home) 25/11/2015 A new version of Radio-SkyPipe: new and improved features! A new iOS version of Radio-SkyPipe: new and improved features! New versions of the Radio-SkyPipe RSS feed. 16/10/2015 Radio-SkyPipe is being adapted to iOS devices! All thanks to John Hoelscher for helping me! 02/09/2015 Radio-SkyPipe is being adapted to iOS devices! All thanks to John Hoelscher for helping me! 25/06/2015 Thanks to the help of John Hoelscher, Radio-SkyPipe is now available for Windows Phone. Thanks to the
