IronPort Secure Email Gateway is a complete email solution that lets organizations send secure email to authenticated users over the Internet and/or intranets while restricting access to authorized users who use secure email to protect corporate assets and operations. IronPort Secure Email Gateway provides a single point of contact for email communication and centralizes email policies, topology, email routing, filtering and monitoring. IronPort Secure Email Gateway supports all public and private communication modes including IMAP (Internet Message Access Protocol), POP (Post Office Protocol), SMTP (Simple Mail Transfer Protocol), LMTP (Lightweight Mail Transfer Protocol) and CRAM-MD5. This flexibility allows users to mix and match a variety of mail delivery methods, while still protecting their email. Even when people use email from different locations or on different devices, they can still access their email the same way without worrying about virus concerns or other security issues. IronPort Secure Email Gateway provides administrators with end-to-end intrusion prevention and detection capabilities. By combining client-side anti-virus software with full-featured clustering technology, IronPort Secure Email Gateway works as a proxy for clients, providing the maximum amount of anti-virus security while simplifying the task of installing anti-virus software. IronPort Secure Email Gateway provides users with a comprehensive email management console that can be used to centrally administer email policies, including secure email rules such as read, send, archive, forward, delete, copy and search, and can help administrators maintain corporate continuity. IronPort Secure Email Gateway is a complete email solution that allows organizations to securely communicate with end users over the Internet or intranets. The product allows administrators to easily define email policies and receive notifications about new, altered and deleted emails. New features in IronPort Secure Email Gateway 8 include: Flexible rules based configuration Provisioning of email domains Auto Provisioning of mailboxes Remote management through the agent service Support of IMAP, POP3, CRAM-MD5, SMTP, and LMTP protocols2.3k SHARES Facebook Twitter Whatsapp Pinterest Reddit Print Mail Flipboard Advertisements By the way, this is the deal that nearly ruined him and a long tradition of American foreign policy.
