Please contact the appropriate company if you want to use one of their products.Right coronary-to-left ventricular distention as indicated by echocardiography. Transthoracic echocardiographic assessment of coronary flow was compared with Doppler assessment in 20 patients with coronary artery disease (CAD) and 20 control subjects. The stenoses of the left main (LM) and the left anterior descending (LAD) coronary arteries were graded according to the degree of coronary blood flow obstruction on coronary angiography. The following echocardiographic parameters were used to assess the coronary flow: 1)
