The lush green trees, meadows of flowers, the road lined with unique stores, these are all the places you see in anime and game characters? When you were young, you played such games as Dragon Quest, Dragon Quest 2, or Final Fantasy, and stories were born from these open worlds. Such a legend never existed before, but through the creation of a universe centered on fantasy action-RPG games like these, we've been able to awaken the fantasy element of ourselves and connect to others who are also playing the game. It would be a shame if this fantasy should be forgotten. That's why we're

creating this new fantasy action RPG. This is the world and story of ELDRING Online. When you enter this world, the setting is the Lands Between. This is a place you wander around aimlessly, lacking any knowledge of your surroundings, encountering numerous enemies and treasures. This is a world that's full of danger, where you're free to act as you wish. For this reason, the game has the following unique characteristics that mark it as a fantasy action RPG. ■ A Vast World Full of Excitement A vast world where open fields with a variety of situations and huge dungeons with complex and three-dimensional designs are seamlessly connected. Travel around the world

What's new:

1. Insert the key created by downloading instructions. 2. Press "OK" 3. Play the game and take note of the updates (revert to previous version) 4. To undo the update, press "Restore Game" 5. Uninstall program 6. Restart your computer Hello, wow this is a really good game, I came to know about it through r3 posts here. So I bought the game with redeem code xsjl3mdhlk2oyktrbyfsdqf. I installed it but it won't work for me, I can't enter the world of tenghit (what's going on?). There is a file called gamerace.dat in the game folder. I changed the value from 0 to 1 and it works now, but it made my char useless. Does anyone have any idea? I have Windows 7 32-bit OS. I wish to make an EVIL RAID that I will be hosting on a 64-bit Windows OS. Can anyone post a list of the key-values for the key? i.e. the pack using this key? : Alfonso, when I do that, it tells me that the key "Moviefaq_Servertype" is missing a value. I tried adding all of the values to the list of pack values (even the hidden ones), but it still won't work. Any ideas? I have been unable to install this hack. I have the 32 bit versions of the files, and I can't open them on a 64 bit computer. I keep on getting the error message: "Windows is unable to verify the digital signature for 1.7.4.0 folder. A previous version of this file was already installed on the computer. To install this version of the file, run the

original publisher's installation package. If the publisher's package did not install this file, contact your software provider." I've tried all different passwords, installing a few times but not many different files, and tried changing the digital signature. I get the same message every time. I have not done this before
