ConsoleHoster

ConsoleHoster allows you to create custom entries for Windows command line, saving a significant amount of time if you frequently use it. The real merit of this application is its ability to run multiple applications inside the console at the same time. This allows you to work faster, as you don't have to move from your regular application to the console one to execute a single command.

This is best described by the application's functionality list: - Allows you to run multiple console-based applications at the same time - Creates tabs for every new application, to display the different command arguments inside - The built-in file explorer can quickly guide you to the folder you need to - You can add all

locations of your drives to the 'Favorites' list - The customized command prompt allows you to store all your common commands and execute them with just a click - You can open a file or create a directory inside the console in just a click -... and many more

Uniform protocol for the administration of beta-adrenergic blocking agents.

The authors outline a uniform protocol for the use of beta-blocking agents in anaesthesia and intensive care medicine. This involves the appropriate premedication, the induction of anaesthesia and the type of prophylaxis for malignant tachyarrhythmias. The authors stress the significance of the practical elements of the protocol and the need to achieve a synergistic effect of the beta-blocking agent and the type of anaesthetic agent used.

Q: Getting MVC Cookie value I am using

MVC3 and have a problem getting the value of the cookie as below:
public void Create() { var result = CookieOptions.Default.Value.GetValue("tmp_password"); } I need to set the "tmp_password" as the 'RememberMe' cookie value. This is not working, I have tried to look into the MvcCookieOptions.cs file but I cannot find where they set the RememberMe value. Any help will be very much appreciated.

Thanks, Michael A: The RememberMe cookie isn't set within the MvcCookieOptions class. The RememberMe cookie is set by MVC itself. I am not sure where MVC stores this and which assemblies it comes from, but here is an example how to set it in your own cookies: Public Class MyCookie 3a67dffeec
