What You'll Need In this part of the How to Draw class, you'll learn how to use AutoCAD's pencil, so-called in the USA and Calligrapher in the UK, to draw freehand lines. Getting Started Before you begin, make sure your screen resolution and color depth is at least 1024 by 768 pixels with 24-bit or 256-color color depth. Open the AutoCAD image shown in Figure 1. This figure shows a screen with a drawing window with a new drawing, the entire screen resized to 7,080 x 5,053 pixels, and in color mode. Figure 1. A new AutoCAD drawing created with the default settings. Create a drawing on the new drawing by using the Drawing command (F2). For more information, see the AutoCAD 2017 Help topic Drawing. How to Use the Pencil Before you start drawing, be sure to set the Pencil Draw option in the status bar, so that you can draw freely and not be limited to the last "snap point." If you don't, AutoCAD will start drawing where the last pencil snap point was, and you won't be able to draw freely. To begin drawing, you'll first select the line segment to be the first segment of the drawing. This segment must be a straight line segment, that is, no arc is allowed. You'll then move your cursor to the endpoint, the last point of the line segment to be drawn. With the cursor in that position, press F6. This command begins the first segment. The system responds by asking whether you want to start with a closed or an open line. Select a line type and click the keyboard OK button. Your first segment is drawn, and you're ready to start drawing the remaining segments. At the end of each segment, your current drawing is saved to a template file, which you can access with a backslash (/) and a sequence number (e.g., C:/DC20131673). AutoCAD stores one template file per drawing. When you draw a second time, AutoCAD will create a new drawing from the template file. If you delete the template file from the hard drive and your drawing is closed, AutoCAD will try to recreate the file. If it can't recreate it, your drawing is lost. You can also select the Edit Shortcuts button in the

The CW's Legends of Tomorrow has been under the microscope since its season premiere, which saw the team splitting up as they search for the power that's been granted to the man known as the Reverse-Flash. The latter half of the season has been all about John Constantine (Matt Ryan), who ends up teaming up with Vixen (Marina being her dual-natured self) and Martin Stein (Victor Garber) in order to find a way to help The Flash, Barry Allen (Grant Gustin), defeat the Reverse-Flash and return things to normal. TVLine caught up with Matt Ryan, who talked about how things have changed for the team, and his love for Supergirl's Tom Cavanaugh, who plays Stein. TVLINE | You were here for the first part of the season, and I imagine you're heading to parts two and three. What are your thoughts on the status of Legends of Tomorrow thus far? Matt Ryan | Well, it's interesting, because I think the first half of the season - after the split, we actually separated our team up, and we went to different places. I guess what I can say is, it seems to be going well, and we're kind of doing the job that we set out to do, which is bringing our own brand of insanity and humour to the table. We have a great cast, we have a great time working together, we have great relationships, and I just think the show has been fun to come in and watch. [Laughs] And then I'll be there. TVLINE | Have you been surprised by how some fans have reacted to the show? Matt Ryan | Yeah, I was a little bit. I was more shocked about that than I was about any of the things
