Other products include: Graphics Exchange Format (GIF, GXF) allowing the exchange of drawings with other programs. Direct Metal Modeling (DMM) which uses a proxy to interface between Autodesk Inventor and other CAD software. ObjectARX The AutoCAD ObjectARX API is used for creating third-party applications for AutoCAD. It provides a mechanism to create and run third party applications in the following ways: Action commands to perform a common set of actions; Functions to access and manipulate all elements in the drawing, especially elements of the model including the viewport, sheet set, and layers; MObjects to store, access, and manipulate geometric, topological, and parameter information about objects; LObjects to store and access model settings, predefined properties, and dimensions; Information packages to hold and manipulate the properties of entities and their component parts such as blocks, views, windows, layer files, linetypes, and others. The AutoCAD ObjectARX API does not let a user directly access the drawing model as it is a read only environment. It is modeled around an independent App.lsp file and, as such, it is not case sensitive. The user will write an App.lsp file, for example, to test that a layer exists and to know whether it is locked or not. This App.lsp can then be called from a macro with the run command. This can be done directly through the graphical user interface or with a batch file. The following commands are available through the objectarx API: ObjectARX ActionCommands.run Run a script file from the command prompt ObjectARX ActionCommands.addObjectARXApp Add the specified script file as an app ObjectARX ActionCommands.removeObjectARXApp Remove the specified app Several versions of ObjectARX are available. Each version has a different version number (e.g. 1.0, 1.1, 1.2). VBA VBA (Visual Basic for Applications) is used for scripts, for example, to create procedures for drafting, design, or product development. It is currently only available for Windows and other operating systems where AutoCAD is preinstalled. It is known as Application ObjectARX.
