Data exchange Since AutoCAD has no way to create a direct link between a drawing's properties and any information in the database, direct importing/exporting is limited to only: Content data: Import data from models and other drawings, typically created by a human Import data from other models and other drawings The drawing and all its content are exported to other drawing formats, such as: Export data Export data for both AutoCAD and a number of other applications is also available. Other CAD programs have no such functionality. AutoCAD includes some built-in work areas, including a clipboard for transferring data to another drawing or to an external text editor, a status bar for displaying essential information on the drawing window and a property manager, which manages drawing properties and allows easy configurability of many drawing parameters. Viewports Viewports in AutoCAD are windowing entities that allow the user to see one or more views of a drawing. For example, a workplane viewport allows the user to view the drawing from the drawing area. A sheet viewport allows the user to view a selected sheet from the drawing area. A layer viewport allows the user to view the drawing in layers. Viewports can be "smart", that is, they support configurable views of a drawing. As of AutoCAD 2016, the viewport has the following features: Layer Sheet Workplane Custom worksheet Cross-worksheet Cross-working space Cross-sheet Custom cross-sheet Multiple viewports Multiple sheets Viewport modes can also be created to allow a user to select among modes that are on by default. Some of these modes, such as the cross-sheet mode, can also be selected as default for the drawing. Viewport modes can be selected by double-clicking a viewport, selecting a mode from the mode list, or selecting a viewport mode by drawing it. Importing into other programs AutoCAD allows importing of data into other drawing applications or databases such as: OneCAD ADINACI PowerCAD Architectural Desktop PowerArchitect The aforementioned applications are "importing" into the drawing from a "source drawing" that is a native AutoCAD drawing. They then display the drawing as a view on their own application. There is no cross-application data exchange between the two drawings. af5dca3d97
