Re: Forum: How to check for malware in all the download/access points? - Answer by <http://seng-ing.crowdamp.com/forum/pc-games-video-games/how-to-check-for-malware-in-all-the-download-access-points#comment-1755> Excellent information.. As a previous poster mentioned, there is a free anti-virus I know may help detect any malware found on the computer. In addition.. Use the file corruption or virus removal programs on the computer to remove any remaining malware that may remain on the computer. Malicious emails can contain or redirect to links or attachments that are designed to scam your bank account. Beware of links or attachments in email that ask you to download files or anything that you are not sure what to do with. Never download files from untrusted people. If you find yourself being asked to download a file, then don't. Use appropriate web browser settings (like disabling or removing their extensions) to reduce the risk of malware or ransomware attacks. You should be careful to only download and install applications, such as games, from trusted sources. Ensure that you only install software from official websites and don't click on links in social media or email messages. If you get any mail from a new sender, it could be a potential scam. Delete any questionable messages right away. Avoid clicking on links in messages from unknown or untrusted sources or replies to anything you receive. Have a look at all the email addresses included in the message. The asset had a corrupted state. It was possible for me to download the asset again from the asset store, but the next time I tried to access the asset, it was no longer available. Re-downloading the asset from the asset store fixed this issue.
