DuoLingo is a new Adobe's online computer-based language education service from practical language courses (previously available only as an offline program for mobile devices). DuoLingo uses artificial intelligence technology to provide intuitive learning experiences to users on desktop computers and mobile devices. It provides subtasks for a particular skill, which provides instant feedback to users during their learning process. I'm not so well-versed in mobile technology to be able to speak knowledgeably about what is happening, but I know one thing, that the mobile version of Photoshop is sharp, functions flawlessly, is pretty intuitive, and the best I've ever used because of its ability to mimic a real computer experience. I can see a day when all photoshop users, whether they use the desktop or mobile versions, will be able to work on multiple projects from any device at the same time, or even multiple cameras at the same time, regardless of the type of device. New Tool: The new 'Page' panel (placed at the top of the screen) is a nice change of pace. Provides quick access to all the panels you need to make your work easier, like the Color panel, the Type Tools Panel, etc. The best part about this is that the page panels can scroll up or down as needed, so you can get direct access to any setting, without having to go to a separate window or panel. Although there are a myriad of options for editing photos, layers, masks, etc., Photoshop has always been the king of photo editing. In my opinion, it also has the most creative application, even if you just want to tweak an image.
