Horodruin is an easy-to-use application for Microsoft Windows that helps you synchronize files between two folders. The main idea behind the program is to allow you to synchronize two folders on your PC without having to relocate your content manually. By using Windows Explorer integration, this tool helps you to specify what to synchronize, where to synchronize and how to synchronize your files. The application is basically a GUI tool that allows you to create, edit and delete files while synchronizing two directories on your PC. When you select the folders to be synchronized, the software will provide you with all the file details, which is what you need to specify when moving or copying your files. When you synchronize your folders, you can specify to automatically transfer all files that have been modified or added to the folder you are synchronizing, or only the newly added files. All files that have been modified will be saved before they are copied or moved to the target folder. All changes will be synchronized and will overwrite any files that are similar in the folders. Horodruin can be used to synchronize both folders located on the same Windows system or different PC systems, which is why the tool was specifically designed for managing and moving files between two locations. When it comes to security, all your settings are saved in a password-protected form. You can use a personal or shared password or specify an alternate one that only you will have access to. You can further specify which location will be used as a source of updates when comparing folder contents and files. The software also allows you to move files between two folders using the standard Windows Explorer. The advantages of the tool include easy file synchronization between two folders, which is essential when moving your content from one location to another. The ability to synchronize different folders from the same PC is an important step in the process of keeping your content up-to-date.
