What's New in the Alban 039;s Script Editor?

Alban's Script Editor is a text editor similar to Windows Notepad, specially designed to help you edit JavaScript.js files. It supports syntax highlighting and common word processing options. Simple setup and familiar interface Installing this app is a speedy task that shouldn't give you any trouble, since there are no unfamiliar options, prerequisite software products, or third-party components bundled. It's packed in a user-friendly interface similar to Notepad, where you can create new JavaScript files or open existing ones. The tool shows line numbers and enables you to jump to any line. Basic text editing options It's possible to undo and redo actions, cut, copy, paste and delete code, use a basic search-and-replace function, as well as to view the toolbar and hide the status bar. There are no other notable options available here. Unfortunately, Alban's Script Editor doesn't make room for customization. For example, it doesn't give you the possibility to personalize text or syntax highlight colors, increase or decrease the font size, or change the font style. Evaluation and conclusion As we expected, it didn't put a strain on the overall performance of the computer in our tests, thanks to the fact that it needed a low amount of CPU and RAM to work properly. We haven't come across any unpleasant surprises as far as stability is concerned, since it didn't hang, crash or display error messages. Although Alban's Script Editor doesn't have richer options and configuration settings, it offers a straightforward solution for quickly and effortlessly editing JavaScript files without having to install complex software products to accomplish this task. We are also taking into account that it hasn't received updates for a long time. The utility can be seamlessly handled by anyone.
