This option allows users to exchange software, video, music and any other type of files from one computer to another. FTP can be used in networks to exchange files between computers. FTP DefinitionFTP or File Transfer Protocol is a set of protocols that are used for transferring data and documents over the Internet or other public or private networks. There are many other types of transfer protocols such as HTTP and HTTPS. FTP lets you upload files and download them from a server. To transfer files from your computer to a server, you will need to use FTP client software. To transfer files from your server to your computer you will need a FTP client. FTP is like a cousin of the HTTP, which is used to transfer files from one computer to another. To upload files from your computer you need to download a ftp client and to download files you will use another ftp client. This client is available on many websites. FTP can be enabled and disabled on
