Updates may be risky, but they usually end up being a very good thing. And it's not even that updating may help you enjoy a better experience, since it's rather unlikely that you will find a way of making it possible to look at his computer without an update. The biggest risk of updating your system is the fact that you may end up losing your settings and files, as well as the possibility of having trouble with an update of Lightroom or Photoshop. However, some reports of such problems are actually relatively rare. Chances are that you will never experience any of these problems. As someone working in the digital photography industry, I'm definitely in need of a software tool that can open, process, and save the RAW images that I have captured with my camera. With Adobe's recent update to their Lightroom 5 release, we now have the full version of an updated version of Adobe's Mac-based image-editing software. As with the previous release, Lightroom has plenty of aspects that I find really handy. We've all been there: a picture or a video is just perfect, but it is so small that it's hard to catch anyone's attention. Or maybe you just want to look at a couple of really great photographs of your small or medium-sized family, but you don't have more than two screens, and scrolling through pictures of your kids is a real pain. But it's not too late to switch your image-shooting to the cloud, so that you have the opportunity to post more photos and videos on different platforms. With the new update, you should also be able to view them in high-resolution. The RAW images can either be stored on the local drives, or in the cloud. This will make it easier for you to sort your images and view them at a later date even if your laptop has become unusable or if you have lost your laptop. And the possibility to upload your images to anyone's Photo Stream is a great idea.
