Elements' Layers panel, and much like Lightroom, lets you create and manage layers, which you can toggle in and out of view and rearrange. You can then apply Opacity, Effects, Filters, and more on your layers. You can even apply some clipping masks to keep the layers apart. One of the more useful features in Elements is also a breakthrough for its functionality: Conditional Processing. You can apply rules such as "Make transparent layers invisible," or "Erase parts of an image and leave the rest," making it simple to crop and burn. In Elements, you can identify and delete different types of data like text, raster objects, or other types of layers. You can also remove ghosts or even optimize your images for web use with the Magic Wand tool. Additionally, when making selections, you can quickly edit them with the Magnetic Lasso or Quick Selection tools, which work much like the Lasso tool in Lumiere. You can also apply advanced artistic adjustments such as Burn and Dodge. After you've placed the cursor over the needed area, Elements makes it very easy to paint a selection. Afterward, you can convert into a layer mask or turn a complete selection into a layer.
