Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

The **iPhone** has had an extremely well-rounded post processing app that makes it simple to create gorgeous shots with any pictures taken by your iPhone or your new addition, the **iPhone 6s**. The iPhone **photo apps** are the reason why you should use your iPhone as your photography platform. In this article, we'll take a look at 9 apps that let you do more than just enjoy your photography. If you think your iPhone has all the photographic substance it needs already, the beautiful RED Epic-W **camera** will certainly make you reconsider. This unique camera has two DSLRs in one, and it's nothing short of gorgeous when you use it to capture the beautiful moments of your life. All you need is the iPhone to **virtually** become a photographer with the **RED Epic-W iPhone clip app**, The only downside that I could notice so far is that you can't lighten/darken highlights and shadows by color, only by pixel. Although not a big deal, it's something I would have liked more. With Eye-One-Dollar, it has no such limitation and the color work I've done so far is more like pre-CS6 than pre-2010, when DXCs was released. Will be glad to see more in the near future. In fact, I hope that it is what Brad Jones always wanted to have in DXC (all work in color) including soft-proofs. However, in the end, it's not very common to have darker/lighter pixels in the final image, even with the pro users. So, 6 months from now or whenever they release the update, I will probably disable it (because I'm a perfectionist) and go back to 5.2. I would welcome that move, if the crowds would not be furious with me. :)
