If you have a complex object that you need to redraw or retouch, use the Clone Stamp. Use an approximate selection to pick the best area, and then press the Stamp tool. Click on the object or part you want to copy, and the clone stamp copies a selection from your active layer or a different layer to a new layer, preserving the move of all your pixels. For removing the background, use the Cloning Stamp instead. Click on the background area, and Photoshop will reveal this selection and copy it into a new layer. This layer serves as the new background. The original objects remain on an active layer, and the background is painted without your cursor. This new feature is designed to help new Digital Crafts enthusiasts with the transition from plain paper to digital photography. A new, much-improved PANorama feature creates seamless panoramic photographs without the need for stitching. This upgrade improves the crop to a square 10 by 10 pixels, removes most distortion, and sharpens the selected objects (enabling you to see your subject more clearly). This feature lets you apply custom settings to What's New To You, enabling you to fill previously empty frames with a specific value—say, a bolt or button—to quickly connect an image to another. Looking for a simple way to annotate a photo, or remove unwanted drawings? With a cleaning brush, brushes, and the Rubber Stamp tool, it's easy. Start with a little planning—pull any areas you want to remove or blend (or paint over) into a photo-editing program—and then use the Brush tool to paint on the areas you want to disappear. Since the Rubber Stamp tool doesn't paint on top of your image, you'll have to repaint over your strokes and erase them a couple of times. Ultimately, the best result is achieved when you test your Color Replacement tool over your photo before applying it.
