This provides for a seamless operation when using Lightroom as a direct file browser that can open and export files. That means you can create an adjustment, select it, and quickly export a JPEG or PNG file. This is a huge improvement, as it allows for a more efficient workflow. This is something that we see from the big players like Apple, Microsoft and Google as well, and one that is certainly indispensable in today's design world. As far as the Export dialog is concerned, I also like that one can easily name the images, folders and version before exporting them. So, what else can be found in Lightroom 5? I have been using Lightroom for a few years and it's really hit a high point with the release of LR6. I think it's the best piece of software I've used., and the sheer power and ease of use is the biggest draw for me. With the new Brushes feature being a huge highlight, I've been using brushes more frequently and have even started using them in Photoshop, sometimes in combination with other tools, in an attempt to get more out of them. I've also been using Filter Gallery much more as a cross-tool, hybrid, and with the new Vignette control I've found a perfect performing cross between the two. My workflow is now optimized, and even with the many new features that LR6 adds I still consider it's far from the most versatile image editing app I've had in my arsenal.
