The biggest selling point of the iPad Pro is that it is a digital or laptop? And that it can work because there is no need to hook up to a more traditional method of editing. The \$80 app is the first step in trying that out. For those who already do so, it's impressive. The Adobe Photoshop on iPad is the first version of the desktop editing powerhouse for the Apple slate. It's a powerful little device with a high-resolution display and a brilliant Pencil support for a premium price, but I maintain that \$80 is a great value. Versions are tied to the Creative Cloud service, which is not to say it is subscription-based. However, you do need a Creative Cloud membership now to use the software offline, which means it will save and load only to the cloud, not your hard drive. Out of all the updates, this one should not come as a shock to anyone. It would be nice to be able to permanently download a version in a single step instead of having to log in to the cloud, but this is still a pretty useful feature. Adobe CC 2015 has introduced new business models to its products, including a new default pricing model, Adobe 1 Platform License Agreement, and new Adobe's business terms (the latter three are detailed here). Both the Creative Cloud membership and CS6 are no longer available for purchase separately. If you just want editing software, you can also opt for "Essential" pricing. However, with the new pricing model, you're no longer given a discount if you choose to purchase after upgrades. Whatever you choose, you'll have to provide credit card data, which may be a concern for a company that limits refunds. Each additional user gets a 2 GB allotment of cloud storage space. You can create a team in order to share cloud storage space.
