Artists in all kinds of fields have always used the various creative tools to create. Iteration is key in creative work. Adobe is great at iteration; Lightroom and Photoshop are also great at iteration. The current iteration of Lightroom 5 is even better than its predecessor. The features being pulled from Camera Raw have now been incorporated into two core components: Lightroom and Photoshop. We'll take a look at both offerings in this review. The new Capture feature makes it very easy for photographers to create professional quality images, even from a smartphone: just tap the screen to snap a photo of the moment and have Lightroom find nearby faces and barcodes. It automatically finds and suggests the best setting for the photo after you access Lightroom's camera simulations. You're in the right spot to continue and refine the photo. No more missed shots and stress - you're in control. Offline previews: A version of Photoshop that runs without an internet connection, anyone? Adobe has released a major update to Photoshop that optimizes the file sizes for storage, download, and editing. The PSD format has remained intact and it fully supports layered PSDs. There are some resizing issues, the focus is heavily on layers instead of paths, GIFs, or JPGs, and merged images get a bit broken, but on the whole, I like the overhaul and think that if you're serious about portability, this is a great option. When you do get online, you can upload your files directly to the cloud. It's a fast, simple backup system, and you get to keep your files.

The all-new Editor is a huge leap forward in how we achieve our outcome and work on images together. The new Editor makes it simple to navigate any Preset layer to build up a finished, styled look. In addition, you can now work on individual or groups of Presets and save them to use as edited sets of Layers. This is the perfect place to build a house of styled assets for looks and feels in your mobile phones, apps or websites. You can now manage and save so much more concurrently, and the ability to edit and interchange between Layers and Presets is a huge time-saver. Subsequently, the new multi-select tools make it easy to canvas, remove, duplicate and move among selected objects. Now you can get into editing and working on your image layers with a single click. Another huge benefit is its ability to fine-tune each of your selection objects. It is now incredibly easy to place your selection, and access the exact corners, edges, and points of your object in the style of the art of the image. You can add layers by hitting the anchors on the corners of your selection, instead of having to click the edge and place to place. It's fast, easy, and the results are the same. Is this everything that Final Cut Pro has been waiting for? Nope. In fact, NAB is going to show you the future of editing today! For the year ahead, Adobe Photoshop plans to push new features based on the ever-developing AI movement:

- With the release of its 2023 version, Photoshop is the first batch of Adobe products to incorporate digital assistants like Amazon Alexa and Google Home into its tools. The AI assistance panels are user-friendly, and offer an example of what AI-powered assistants in the future may look like. At the moment, they're in the early stages of development, but that doesn't mean you can use this functionality today. For instance, to take action to create a new file based on user input, you'll have to train Photoshop. Working on this will start in the fall.

- Adobe is working on an AI-powered Design School, which will create design-oriented educational content. This isn't like the free Design Academy where you can build a portfolio by using the software. Like other AI-powered initiatives from Adobe, it will be a paid subscription service with specific learning modules on topics ranging from animal to medical illustration.
- We're also seeing AI assistants like Adobe Sensei further develop in 2020. Adobe is working on Adobe Sensei, a visual editor powered by AI that helps create the visual magic in your images and videos. It's currently in the prototype stages, but the intention for it was to roll out in the fall for the software. By bringing this into Photoshop, it's easier to integrate this and other AI-based tools.
- AI isn't just for the photo editing apps. Adobe is also working on visual design apps, like Face Illusion, Adobe Color the ability to alter the contrast of an image, and Adobe Sketch. All this comes to a version of Photoshop in the fall.
