I just got the 5.2 update and I love the changes. I've used Lightroom for many years and I also have a lot of Adobe products like Photoshop, Photoshop Elements etc. So I don't really see the reason why anyone would pay to use the new features of Lightroom. In my opinion the price for a Lightroom version remains the same. The new features are for photographers and not for people who edit photos lightly. I use Aperture and Photoshop for years and I like the creative apps for that. While editing photos, I wanted to see the information in my files. You can get that on Lightroom 3, but it's not a user friendly workflow. But I never liked that world in the first place. Lightroom has a lot of customization and the user interface is not the best. Other than the Learning Center, I couldn't find convincing tutorials. Do you have any support options available for Photoshop like Lynda.com? If not, I would like to see some online support with tutorials and the like. You could create a new website which could provide tutorials, training and support for Lightroom. I would be willing to pay for that. I'd even pay a monthly fee for that. But I couldn't find such a service for Lightroom. And people like me want to learn more about the editing of photos with a such powerfull software.... Thank you for sharing your impression of 4.0. I have switched from Lightroom 3 to 4 and started editing my photos in a completely different way. It now moves faster and I feel more comfortable. In my opinion, its major benefit is the PHOTO BROWSER UI. It is so fast,so intuitive and supports a wide range of features which are now formulating the editing process. Lightroom's workflow is based on the Edit 16 Check settings which have been developed by the Lightroom team. They are in place to provide a familiar interface for new users and allows existing users to continue working as they have been accustomed to. One other aspect which makes Lightroom so user friendly is the UR methods they have developed in 4.0. The UR methods let you easily update to future versions of Lightroom. My workflow is as follows: As I create an Import : I use the RAW Finder to select files to Import. As I import my files, I test them in the Develop Module. I always have a backup for failed imports. I test them further in the Develop Module in one of the Color Modes. My final crop, vignetting and toning adjustments are developed in a separate module as a virtual copy. I save for the final time. When I have all the edits I want to save for final processing, I re-save as a JPG setting a custom Mode to make those edits final. If I have neglected a specific adjustment, I restart the

workflow from the RAW Finder again. In the final step the updated JPGs go to the "printing phase" with the application's Photo Print module. It's very comprehensive, and has simplified workflow tremendously. Its more intuitive than any other workflow I have used previously. I hope you get to try out 4.0 over the holidays :). I see great improvements in 4.0. I am currently editing some images in 4.0 Beta which I will report back after I get finished.
